Scrumming on Jira

PLAN, TRACK, REPORT

Jira is one of the most often used tool for agile project-management purposes. Due to its simple way of planning, tracking and reporting, Jira provides a great scope of functions.

ITERATIVE PROCESS

Especially, external conditions in the development-environment can change very quickly. Therefore, working iteratively is one of the most important aspects while developing.

TIME-TRACKING

In times of efficiency, there is a need of time-tracking in order to optimize several processes.

CUSTOMIZATION

Jira supports more than 3000 additional plugins to adapt to specific needs. On top, this provides the ability to live Scrum after own adjustments.

OUR TEAM

Fabian Braun

- Scrum Master
- Software Architect
- Implementer (Game Engine)

With a lot of experience in developing several applications, Fabian knows which aspects are the most important ones to focus on.

Luca Rutschmann

- Implementer (Game Engine)
- Tester/Reviewer

Testing developed code is an activity that Luca loves to do in every project.

Nicolas Wagner

- Project Manager
- Implementer
(Surface/Overlay)

Good project-management can improve its success by a lot. Nicolas considers PM as the most significant task in a project.
