# The Project Vision

Define Analyse Implement Review Publish Maintain

- self-developed engine
- Multiple difficulties
- customized
  - designs
  - effects
  - music

- RUP terminology used
- PM using Scrum and Jira
- technology according to current standards

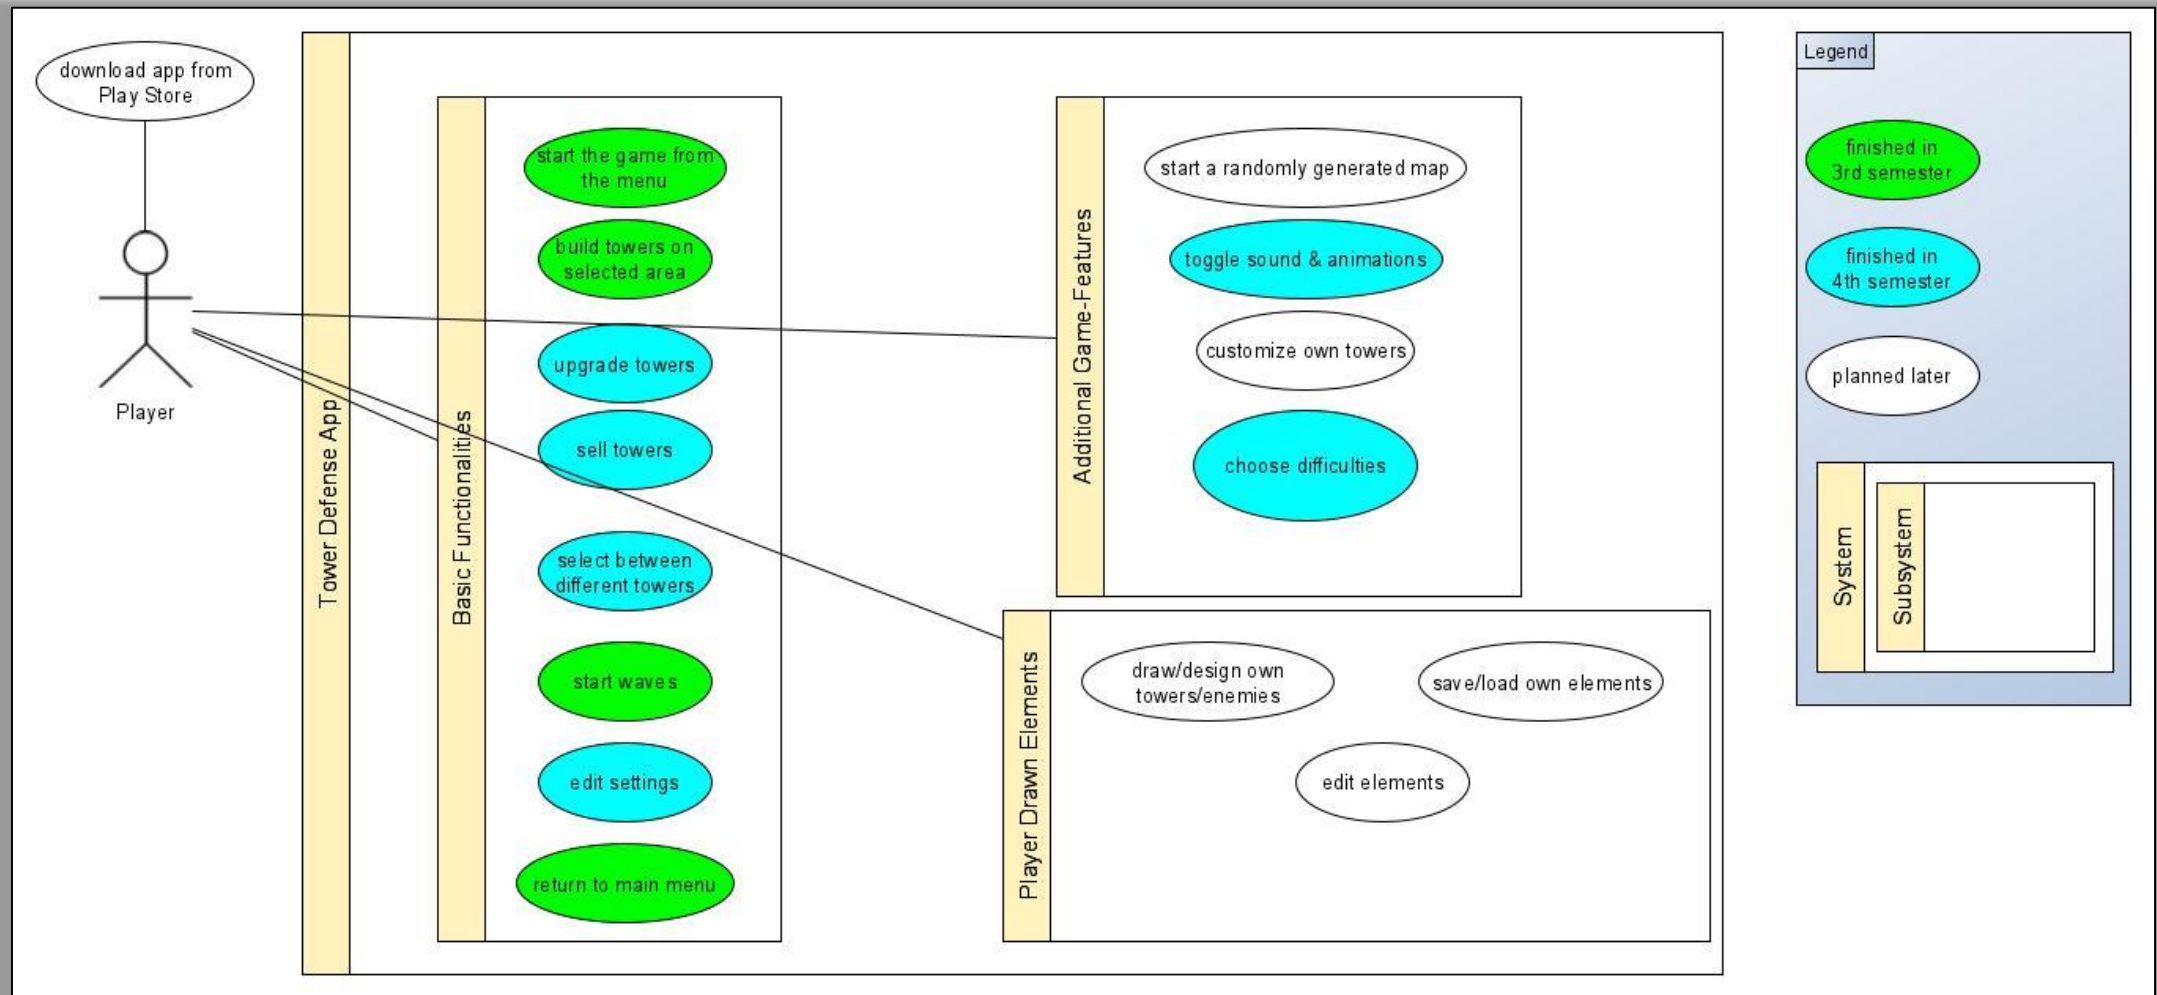

- unique game-concept
- creation of a community
- potential for high user amount after months

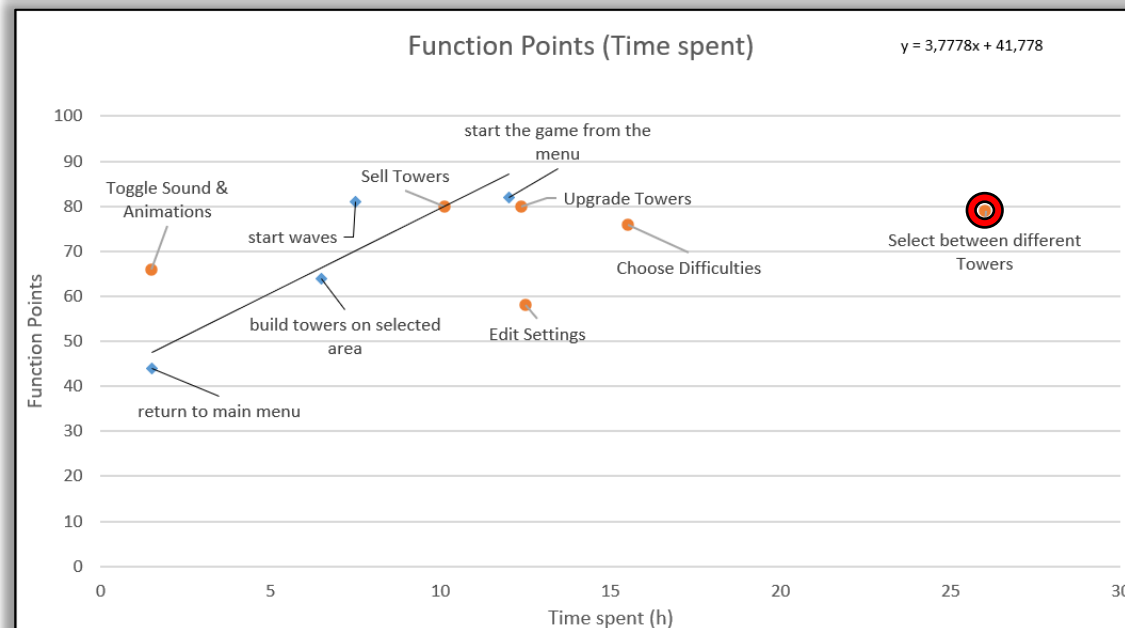

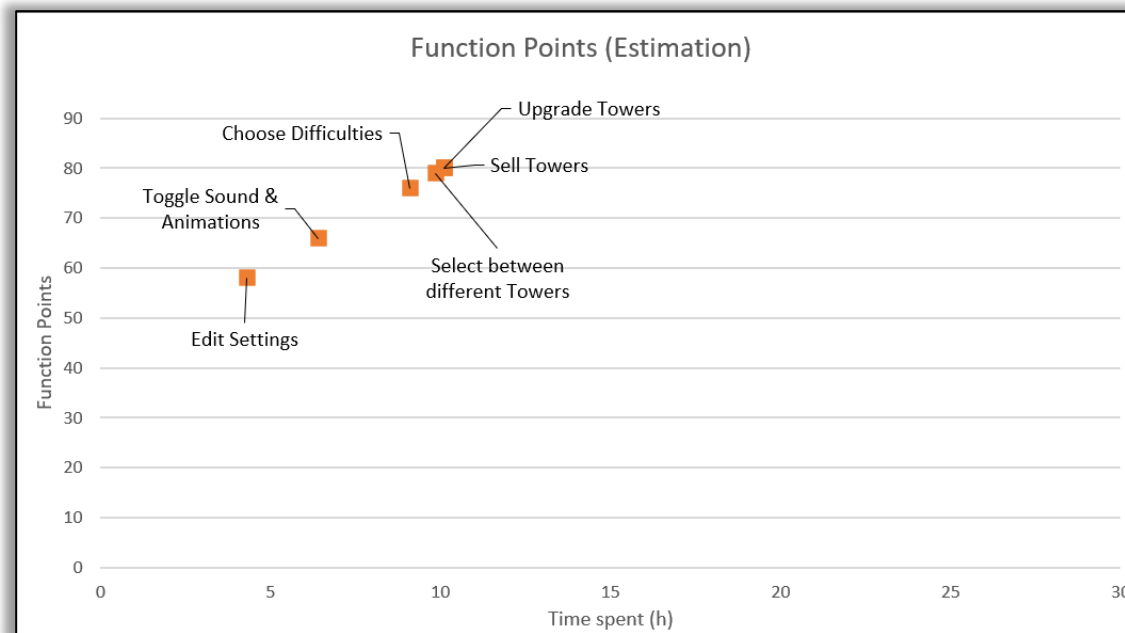

# Use Case Diagram

# Estimation

# Scrumming on Jira

## PLAN, TRACK, REPORT

Jira is one of the most often used tool for agile project-management purposes. Due to its simple way of planning, tracking and reporting, Jira provides a great scope of functions.

## ITERATIVE PROCESS

Especially, external conditions in the development-environment can change very quickly. Therefore, working iteratively is one of the most important aspects while developing.

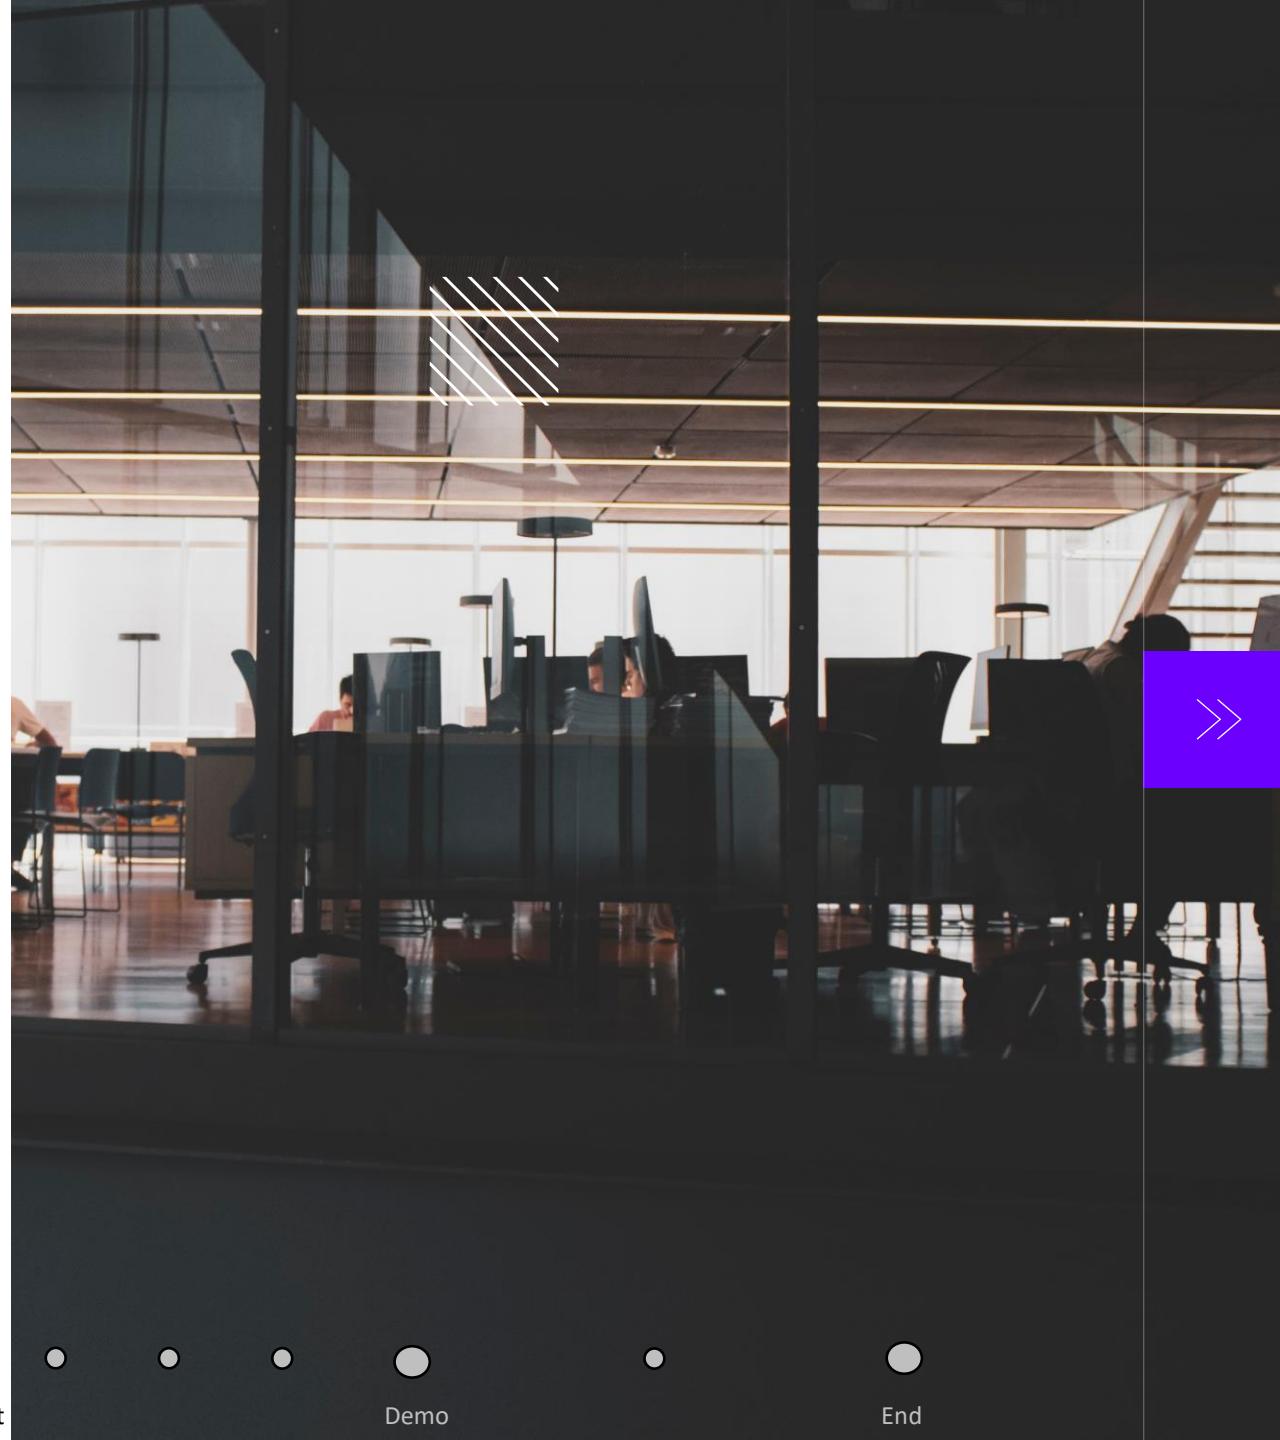

## TIME-TRACKING

In times of efficiency, there is a need of time-tracking in order to optimize several processes.

## CUSTOMIZATION

Jira supports more than 3000 additional plugins to adapt to specific needs. On top, this provides the ability to live Scrum after own adjustments.
